## Concept Searching Announces Microsoft Information Worker Solutions Certification

### *Concept Searching a Microsoft ISV Achieves Microsoft's Information Worker Solutions Certification*

McLean, VA – February 11 – Concept Searching, developers of compound term semantic metadata generation, automated classification, and taxonomy management software has achieved the Microsoft Information Worker Solutions certification. The certification is awarded to Microsoft Partners who develop solutions and deploy services based on the Microsoft Office SharePoint Server (MOSS) and Microsoft Exchange Server 2007 technologies, including specialization components such as Search, Data Visualization, Enterprise Project Management, Portals and Collaboration, Office Solutions Development, Performance Management, Enterprise Content Management and Forms, Office Systems Deployment and Unified Collaborations.

“We are very pleased to have obtained this certification. Microsoft requires strict standards in competency certifications and comprises a combination of technical certifications, client projects and references,” said Martin Garland, President. “By achieving this certification we are able to clearly illustrate the strength of our solutions and expertise in content management solutions.”

Concept Searching, a Microsoft ISV, delivers full integration with Microsoft Office SharePoint Server 2007, Search Server 2008, Search Server Express, Microsoft Office and Exchange through SOA compliant services, Web Parts, and Open XML. The product, conceptClassifier for SharePoint does not need a separate index, automatically populates Microsoft SharePoint properties with compound term metadata, and fully respects inherent Microsoft SharePoint security. The delivery model has proven to provide business process improvements in any application that requires access to unstructured information. By removing the complexity typically associated with classification and taxonomy solutions and overcoming the hurdle of single word classification Microsoft clients have been able to realize quantifiable business benefits.

### **About Concept Searching**

Founded in 2002, Concept Searching's software products deliver semantic and compound term metadata tagging, automated classification, and taxonomy management solutions from the desktop to the enterprise. Concept Searching is the only statistical metadata generation and classification software company in the world that uses concept extraction and compound term processing to significantly improve access to unstructured information. Headquartered in the U.K. with offices in the U.S. and South Africa, Concept Searching solves the problem of finding, organizing, and managing information capital.
