conceptClassifier for SharePoint Best In Class Product

A 'KMWorld Trend Setting Product of 2009'

McLean, VA & Stevenage, U.K. – August 21 – Concept Searching a leader in developing automatic semantic metadata generation, automated classification, and taxonomy management software announced today that conceptClassifier for SharePoint has been selected as a KMWorld 'Trend Setting Product' for 2009.

The annual award compiled by [KMWorld](#) recognizes products that are best in class. This year more than 800 products were assessed by the judging panel, which consists of editorial colleagues, analysts, system integrators, vendors themselves, line-of-business managers and users. According to Hugh McKellar Editor in Chief of KMWorld, "the criteria for the award were products that demonstrate clearly identifiable technology breakthroughs that serve the vendors' full spectrum of constituencies, especially their customers."

conceptClassifier for SharePoint runs natively in Microsoft SharePoint and delivers automatic semantic metadata generation, automated classification, and taxonomy management. Fully integrated with Microsoft search products, FAST ESP, and Microsoft Office, the technology maximizes the strengths of SharePoint to uniquely solve enterprise content and search challenges. Utilizing innovative Compound Term Processing the technology identifies multi-word terms that form a complex entity, or concept. The automatically generated semantic metadata can be used by any search engine index to extract more precise and relevant information. The flexibility of the technology renders it valuable to a wide range of enterprise challenges and has been deployed by clients to improve search, ECM, Records Management, Compliance, eDiscovery, Litigation Support, and as a tool to identify unknown data privacy exposures.

"The selection of conceptClassifier for SharePoint in KMWorld's Trend Setting Products of 2009 is a great honor for Concept Searching", said John Challis CEO/CTO. "We continually focus our efforts on extending our technology to address a wide range of enterprise content management challenges and utilize the strengths of the SharePoint platform to deliver real value to our clients. To have conceptClassifier for SharePoint recognized as a best in class product is very rewarding."
