

JumpStart Taxonomy Development

Developing a taxonomy can take considerable time, resources, and money. Depending on the complexity it may take many months, several iterations, and on-going maintenance to continually improve the classification. However, the benefits far outweigh the challenges and a taxonomy will improve productivity, reduce costs and increase organizational agility. The taxonomy is a critical component for managing enterprise information and is essential in delivering accurate information spread across potentially massive volumes of information in a consistent manner. A taxonomy that is well structured makes information retrieval fast, accurate, and leads to quantifiable business benefits.

By using Concept Searching's library of taxonomies coupled with conceptClassifier for SharePoint organizations can now have the best of both worlds, achieving rapid implementation and the ability to fine tune the taxonomy for enterprise specific requirements.

What could be better?

Taxonomy Library

Concept Searching has leveraged over fifteen years of taxonomy development expertise to provide an ever growing library of taxonomies that are integrated into conceptClassifier for SharePoint including:

- Agriculture
- Automotive
- Aviation
- Banking, Finance, Investment
- Building & Construction
- Communications
- Education & Training
- Electronics
- Energy & Financial Trading
- Environmental
- Food & Beverage
- IPSV v2.00
- LGCS v2.03
- Medicine
- MeSH 2009
- Mineral, Mining, & Drilling
- Oil & Gas Drilling
- Regions
- Retail
- Safety & Security
- Science & Technology
- Services
- Textiles
- Transportation

We update our Taxonomy Library on a regular basis, please contact us if you are interested in a taxonomy not listed

The Benefits

Concept Searching's industry specific taxonomies provide the framework for taxonomy development. Incorporating industry specific terminology with best practices enables organizations to accelerate taxonomy deployment and to effectively classify and search information assets and rapidly realize the business benefits.

Having the taxonomy framework in place, Concept Searching's concept-based automatic classification, will classify content to one or multiple nodes. Once classified, the easy-to-use taxonomy tool has robust features that enable subject-matter experts to interact with the taxonomy and further customize it to meet specific or unique organizational requirements.

Taking the guesswork out of taxonomy development combined with the ability to modify the taxonomy delivers the optimal solution and achieves many benefits including:

- * Incorporates industry specific metadata
- * Provides the base for accurate and consistent subject metadata
- * Logical and standardized way to index and classify information
- * Accelerates the taxonomy development process
- * Ability to modify the taxonomy to meet specific organizational requirements
- * Identification of content relationships in a well defined structure
