

Fragomen Deploys conceptClassifier for SharePoint and Sysero KMS from UC Logic

World's largest single practice law firm goes live with Sysero KMS and Concept Searching

McLean, VA, US and Stevenage, UK – February, 2011

[Concept Searching](#), a global leader in semantic metadata generation, auto-classification, and taxonomy management software, and developer of the [Smart Content Framework™](#), and partner [UC Logic](#) are pleased to announce the deployment of conceptClassifier for SharePoint from Concept Searching and Sysero Knowledge Management software from UC Logic.

Fragomen, established in 1951, has grown from its initial stature as a top-ranked U.S. immigration law firm to being acknowledged as the world's premiere global immigration law firm. As the world's largest single practice law firm the company required a solution to manage their knowledge assets which included world's most comprehensive and dynamic set of documents covering the intricacies of global immigration. The solution included the deployment of UC Logic's Sysero KMS, a knowledge management system for the legal profession that is integrated with Concept Searching's conceptClassifier for SharePoint.

Fragomen classifies documents under a number of classification schemes and a major requirement of the new system was the ability to automatically classify content as it arrives in Fragomen's Global Resource Library. Concept Searching's conceptClassifier for SharePoint eliminated end user tagging through automatic semantic metadata generation and classifies the documents in real-time to the Global Resource Library taxonomy. Integrated natively into SharePoint, this allows Fragomen to apply their filing schemes to content based on the automatic analysis and identification of concepts provide by conceptClassifier for SharePoint and enables concept based searching for the legal professional to quickly find relevant and accurate information, regardless of where it resides.

According to Martin Garland, President Concept Searching, "conceptClassifier for SharePoint is an extremely valuable technology for any organization that places high value on unstructured content. We are very pleased that Fragomen selected our technology and UC Logic's software to manage their Global Resource Library."

About Concept Searching

Founded in 2002, Concept Searching is now the industry leader specializing in conceptual metadata generation, auto-classification, and taxonomy management. Platform agnostic, Concept Searching is also a Microsoft managed partner with a Gold competency in Application Development, and offers a complete suite of SharePoint solutions. The award winning technologies integrated with Concept Searching's Smart Content Framework™ encompass the entire portfolio of unstructured information assets in on-premise, cloud, or hybrid environments. Clients have deployed the intelligent metadata enabled solutions to improve search, records management, protection of privacy data, migration, text analytics, eDiscovery, and Enterprise/Web 2.0.

Concept Searching is headquartered in the US with offices in the UK, Canada and South Africa. For more information about Concept Searching's solutions and technologies visit www.conceptsearching.com and our [Blog](#), and follow us on [Twitter](#) and [LinkedIn](#).

About UC Logic

UC Logic has been supplying DM and KM services to the UK/EU Legal Market for 8 years. UC Logic is the only vendor independent DM consultancy, working with some of the largest law firms in Europe on migrations, upgrades and custom developments. From its long association with the legal profession, UC Logic has developed a number of specialist DM Utilities and SharePoint based KM Solutions. These solutions allow firms to build in-house knowledge libraries; combine in-house knowledge with outsourced Know-How from providers such as PLC; use RSS feeds and specialist web sites to keep Fee Earners updated; and use in-house expertise to build powerful marketing campaigns. For more information visit www.ucllogic.com or email info@ucllogic.com.
